

NURSE COURIER® DS SOFTWARE

Keeping Patients and Staff Connected

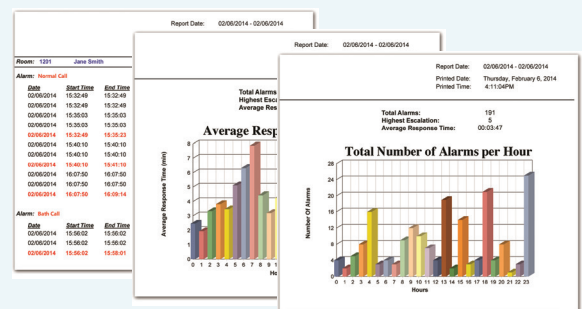

The user-friendly graphical interface allows staff to view and modify the assignment of patient calls to mobile devices such as pagers and wireless phones. Different types of calls can easily be routed to different caregiver levels. Unanswered calls automatically roll over to the next staff level.

These user-intuitive, “drag and drop” operations, allow staff to simply click on the device that is to receive a call, then drag and drop it into the assignment window.

The objective of a Nurse Call System is to efficiently process patient calls and associated tasks. Nurse Courier DS Software links your Nurse Call System with mobile phones and pagers resulting in improved response times as requests go directly from the patient to the caregiver.

In addition, call activity, status, patient information and, open call times can be displayed on wall boards and message displays in hallways and common areas. This provides vital information to initiate and complete service tasks.

Management Reporting Software is included in the DS package. It provides comprehensive reporting on caregiver response times, workflow, and historical data on patient call activity.

A Practical Solution for Healthcare Facilities

Nurse Courier DS Software integrates your Nurse Courier System to multiple systems in your facility. Patient calls are no longer limited to only communicating with the staff console. This integration enables a quicker response times to patient requests, streamlines workflow, and ultimately improves patient care.

PC WORK STATION

Reporting Software captures virtually every event that occurs, from the time that a call button is pressed, to the time that the call is completed. This includes all patient calls, call answers, call response times and more. Nursing Managers can easily track and analyze calling activity for a single patient room, a nursing area or floor.

WIRELESS PHONES

Patient call and status of active calls are displayed in real time at numerous locations throughout a facility. Staff are made aware of open calls in the system and call priority allowing them to respond appropriately.

PAGERS

A call from a Room Station automatically transmits a message alert, such as a code or rapid response team, to a pager worn by an individual or group.

WALLBOARDS

Patient call and status of active calls are displayed in real time at numerous locations throughout a facility. Staff are made aware of open calls in the system, their priority, escalation level and can respond appropriately.

MESSAGE DISPLAYS

Alpha numeric displays provide visual annunciation of active calls in the Nurse Call System. Multiple displays can be connected anywhere on the LAN.
