Visual Console Alarm Manager

Telecor's Alarm Manager provides real time classroom status during a lockdown event in a school.

Occupants in locations designated as Shelter in Place, such as classrooms, can report their status directly to the front office or command center.

Responders can view the status of classrooms on a room-by-room basis, clearly displayed on a detailed facility floor map, using Telecor's Visual Console graphical user interface (GUI).

Classrooms receive pre-recorded messages according to the school's Emergency Response Plan with instructions on procedures during specific emergency situations.

The Alarm Manager also enables two-way communications between classroom locations and first responders, including features such as covert listen.

The Alarm Manager easily integrates with your existing Telecor eSeries communication system.

- Status in real time indicated with color coded icons
- Interactive 3D and 2D floor plans
- Indicates medical/security call-ins
- Utilizes existing eSeries Visual Console GUI
- Integrates with District Wide features
- Pre-recorded instructions to classroom occupants

Acknowledgments from fixed or virtual alarm stations alert the office when classrooms are secure.
